

## Activating Flash in the Google Chrome Web Browser

To ensure flash is enabled, please follow these steps:

1. Open your Google Chrome web browser.
2. Open your settings by clicking on the icon referenced below, located on the upper right hand side of your browser:

Then click on Settings.

3. In the middle of the Settings page, type in **Flash**:

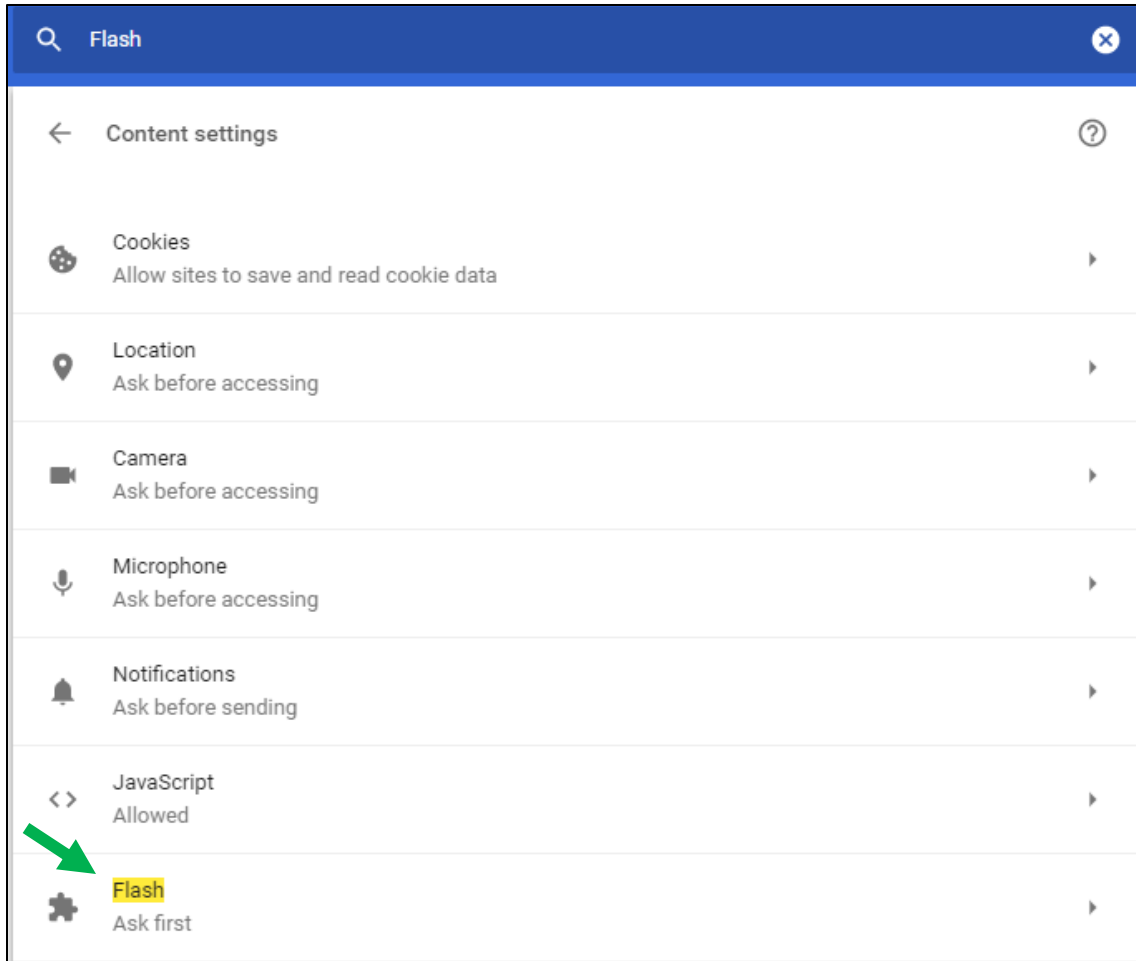

Then, click on Content Settings (noted by a yellow box that reads Flash).

**Privacy and security**

Google Chrome may use web services to improve your browsing experience. You may optionally disable these services. [Learn more](#)

- Use a web service to help resolve navigation errors
- Use a prediction service to help complete searches and URLs typed in the address bar
- Use a prediction service to load pages more quickly
- Automatically send some system information and page content to Google to help detect dangerous apps and sites
- Protect you and your device from dangerous sites
- Automatically send usage statistics and crash reports to Google
- Send a "Do Not Track" request with your browsing traffic
- Use a web service to help resolve spelling errors  
Smarter spell-checking by sending what you type in the browser to Google
- Manage certificates  
Manage HTTPS/SSL certificates and settings 
- Content settings  
Control what information websites can use and what content they can show you 
- Flash  
Clear browsing data 

From here, click Flash:

Depending on your preferences, you may prefer to allow flash from specific websites only. If this is the case, click **ADD**, as noted on the screenshot below and add the web address for the TPA Flight Tracker (<https://flighttracker.casper.aero/tpa>). Once completed, flash will support this website in the future, with no need to update system settings in the future.
