**Rating Summary:** The long-term ratings continue to reflect Tampa International Airport's (TPA's or the Airport's) stable origin and destination (O&D) market position, the favorable economic and demographic characteristics service area, and enplanement growth and expenditure controls that have contributed to relatively low airline costs, sound debt service coverage, and robust liquidity levels. Offsetting the aforementioned strengths are the size, scope and complexity of TPA's multi-year capital improvement plan (CIP), significant portions of which will be debt financed, and reliance on a rates by resolution framework, which introduces somewhat less operational certainty than a more traditional, longer-term use and lease agreement. Importantly, KBRA notes that the economic strength of TPA's air trade area and the diversity of carriers serving the Airport help to offset typical concerns regarding use of an annual, resolution based rate setting regime.

Hillsborough County Aviation Authority (the Authority) owns and operates TPA and three general aviation airports (collectively, the Airport System). TPA accounts for substantially all the Authority's commercial enplanement activity and >98% of the Authority's annual revenues. The senior bonds are secured by a pledge of Airport System net revenues. Subordinate lien bonds are

payable from remaining net revenues after payment of the senior lien bonds, as well as from available passenger facility charge revenues (PFCs). KBRA makes a rating distinction between the senior and subordinate liens given the priority of payment from net revenues accorded to senior lien bondholders.

TPA is a 58-gate large hub airport serving 5.2 million people in and around the Tampa-St. Petersburg-Clearwater Metropolitan Statistics Area (Tampa MSA) along Florida's central gulf coast. The Airport faces little competition with Orlando International Airport, the nearest sizable commercial airport, located 92 miles away. Carrier mix is diversified with Southwest, the largest carrier at TPA, accounting for 25.0% of enplanements in FY 2024.

Enplanement activity increased at a pace similar to that of the overall U.S. air market in the ten years preceding the pandemic and has outpaced the U.S. through the subsequent recovery. Enplanements were 13.5% above the pre-pandemic level in FY 2024. Activity has softened in more recent months, reverting toward a more sustainable long-term growth trend. Enplanement activity in March 2025 was down 3.1% YoY compared to a 0.2% YoY decline in TSA security checkpoint volume across the overall U.S. air market.

The Authority received \$181 million in pandemic-related federal assistance which it applied to operations between FY 2020 and FY 2023 to mitigate the financial impact of reduced passenger activity. Management also took steps including maintenance deferrals, a hiring freeze, a voluntary separation incentive program, temporary closures of underutilized facilities, and deferred capital projects to conserve financial resources. These measures helped to support strong debt service coverage of at least 2.0x for senior lien bonds and 3.0x for subordinated lien bonds over the past five years. FY 2024 coverage as calculated per the respective trust agreements was 3.79x for senior bonds and 7.31x for subordinate bonds. As specified in the respective trust agreements, PFC revenues are applied to the subordinate lien bond (but not senior lien bond) debt service coverage calculation. Management projects coverage will remain strong for both the senior (2.76x) and subordinate liens (7.34x) in FY 2025.

This surveillance report was revised on July 29, 2025, to update Figure 3 on p.5 to correctly state the level of extraordinary pandemic-related federal funds applied to operations in FY 2024 and the airline revenue sharing amounts for each year presented.

The Authority's \$3.5 billion capital program spanning FY 2025 to FY 2030 calls for the completion of the new 16-gate Airside D concourse in 2028, bringing the total number of gates at TPA to 74. Airside D and other 2022 Master Plan Update Projects comprise 55% of capital program spending over the period, with other capital improvement plan projects accounting for 45%. Approximately two-thirds of capital program spending through FY 2030 will be debt financed including the \$463 million in principal issued per the Series 2024B bond sale last year, \$1.3 billion in senior bonds to be issued across one or two sales in CY 2026 and CY 2027, a \$123 million subordinate lien bond sale planned for CY 2026, and a \$479 million senior lien bond sale planned for 2028. Management anticipates modest cost escalations upon final 100% design, but cost and scope are expected to remain substantially similar. The Authority plans to use reserves and PFC funds where possible to reduce the 2026 debt component.

Authority liquidity is strong with available operating funds and surplus fund cash and investments providing 870 days cash on hand (DCOH) as of FYE 2024. Management projections that liquidity will grow to 997 DCOH by FYE 2025. Financial flexibility is additionally enhanced by a \$150 million revolving credit facility. The facility was procured in April 2025 for a five-year term and currently has no outstanding balance.

The Authority has employed a cost-recovery focused, resolution based rates and charges framework at TPA since the lapse of its prior airline-airport use and lease agreement (AULA) in September 2020. There are no limitations to the frequency or timing of rate adjustment under the current rates by resolution approach, and the Authority has no immediate plans to revert back to a multi-year AULA. KBRA continues to view the favorable economic and demographic characteristics of TPA's service area, coupled with the Airport's strong O&D market and diverse carrier mix as supportive of a rates by resolution methodology. Landing fees are calculated on a residual basis while terminal/airside rental rates are calculated on a compensatory basis.

Airline costs per enplanement (CPE) were among the lowest for large U.S. hubs at \$4.94 in FY 2019 but have moved higher as a result of debt issued to fund CIP projects. CPE is budgeted for \$12.11 in FY 2025, which reflects the second, normalized, post-pandemic fiscal year, with fully recovered utilization and the absence of federal assistance. Additional borrowing necessitated by the CIP was forecast in the 2024 Report of the Airport Consultant to push CPE to \$21.44 by FY 2030, which KBRA views as moderate.

The Stable Outlook reflects the expectation that the Authority will continue to adopt necessary revenue and expenditure measures to meet all financial obligations and bond rate covenants as it continues to fund and implement its multi-phase CIP.

### Key Credit Considerations

The rating actions reflect the following key credit considerations:

#### Credit Positives

- Broad and growing air trade area economy and healthy population growth support increasing demand for air travel, while the O&D nature of airport activity (~95%) confers stability.
- Diverse carrier mix with existing airlines continuing to strategically add new domestic and international routes, which is supportive of continued enplanement growth.
- Airline costs are competitive.

#### Credit Challenges

- Multi-phase CIP entails significant additional borrowing.
- Somewhat less operational certainty created by a rates by resolution framework, though TPA's diverse carrier mix and economically robust air trade area serve as mitigating factors.

### Rating Sensitivities

▪ Completion of capital program on time and within budget, accompanied by enplanement trends in-line with the years just prior to the pandemic.	+
▪ Cost overruns or delays associated with the CIP.	-
▪ Weakening of debt metrics beyond the current forecast.	
▪ Trend of weakened liquidity levels and/or debt metrics.
